

OpenERP 6.0 - What's new?

Olivier Dony, OpenERP Community Manager

May 14th, 2010

Outline

- 1 OpenERP 6.0, Business Application Suite
- 2 Technical news for 6.0
- 3 Communities!

Quick market analysis

OpenERP is disruptive

Disruptive Product

- Modern programming language
- Modular approach, incremental contribution
- Fully web-based
- Classical or cloud deployment

Disruptive Business

- Free download
- Contributions and Community fuel the product
- Value created is fairly split between Customer, Service Provider, and Publisher

2010: Cornerstone for OpenERP

During the last 5 years, OpenERP has matured into a **smart Enterprise Management software suite**, with a **world-wide brand**, and a **strong market demand**.

OpenERP SA will now **focus** on being the **OpenERP Publisher**.

OpenERP Publisher: Key Goals

- R&D, Product Development
- Services to Partners
- Community Relationships
- SAAS Offer

OpenERP 2010

Research and Development

- Dedicated R&D teams
- SCRUM methodology
- Focus on **quality**
- Tests: tools + test suites

Services to Partners (one2many)

- Professional Services
- Maintenance Services
- Training Services
- Development Services

Community Relationships

- Community Structure
- Community Recognition
- Communication

SAAS Offer

- Low-cost online offer
- Standard modules only
- Partner Benefits

OpenERP 2010

Research and Development

- Dedicated R&D teams
- SCRUM methodology

- Modular web client

3 Communities!

- Official recognition
- Improved processes
- Communication

OpenERP 6, Business Application Suite

OpenERP 6.0 is becoming a true **suite of Business Applications**, not a classical ERP anymore.

- By reducing the dependencies between standard modules, OpenERP 6 will make it **easier** to install **specific Business Applications** only. For example: installing Sales without pulling Manufacturing.
- By organizing the menu and interfaces in an **application-centric** way, OpenERP will behave like your typical **dedicated** software, for **each context**.

Improved usability and ease of use

To bring the **usability** and **ease of use** levels of a dedicated piece of software, OpenERP 6 brings:

- Completely redesigned web interface
- Applications-centric interface
- Per-application menu structure, streamlined
- Contextual shortcuts and navigation
- Flexible configuration wizards
- Simplified lists

Simplified menus

The screenshot shows the OpenERP 6.0 interface with a simplified menu system. The top navigation bar includes File, User, Form, Options, Plugins, Shortcuts, and Help. Below the menu bar is a toolbar with icons for New, Save, Delete, Back, Forward, List, Form, Calendar, Diagram, Graph, Print, and Action. A secondary menu bar shows Sales, Project Management, Knowledge Management, Financial Management, Human Resources, and Administration. The main workspace displays a hierarchical menu structure under Project Management, with options like Projects, Tasks (which is currently selected), Messages, Time Tracking, Invoicing, Scrum, Reporting, and Configuration. At the bottom left is a Shortcuts panel with a search icon. The footer provides the URL socket://openerp.myodoo.com:80..., the user name Olivier Dony, the company information Company: OpenERP sa, and a status message Requests: No request.

             group_by=['user_id', 'project_id'],  
             ...)  
# returns dict with results + domain and context  
# for expanding groups
```

Search view context

The screenshot shows the OpenERP 6.0 interface with the 'Products' search view selected. The top menu bar includes File, User, Form, Options, Plugins, Shortcuts, and Help. Below the menu is a toolbar with New, Save, Delete, Back, Forward, List (selected), Form, Calendar, Diagram, and Graph buttons. A breadcrumb navigation bar shows 'Menu < Tasks < Products'. The main search form has fields for Code, Name, and Category, with dropdown menus for Services, Stockable, Can be sold, Can be Purchased, Location, and Pricelist. The Pricelist dropdown is open, showing 'Public Pricelist (EUR)' and 'Default Purchase Pricelist (EUR)'. Below the search form is a table with columns: Code, Name, Category, Default UoM, Product Type, Real Stock, Virtual Stock, List Price, Cost Price, and State. A single row is selected with the code 'dfsdf', name 'test', category 'PCE', product type 'Stockable Product', and cost price/list price both set to 1.00. At the bottom, status bars show 'Record: 1 / 1 of 1 - Editing document (id: 1)', 'State:', 'socket://openerp.myodoo.co...', 'Olivier Dony', 'Company: OpenERP sa', 'Requests: No request', and a footer with navigation icons.

Code	Name	Category	Default UoM	Product Type	Real Stock	Virtual Stock	List Price	Cost Price	State
dfsdf	test	PCE	Stockable Product	0.00	0.00	1.00	1.00

Outline

1 OpenERP 6.0, Business Application Suite

- Improved usability and ease of use
- Improved business applications
- Demo

2 Technical news for 6.0

- Views
- **Test framework**
- Generic framework improvements
- Modular web client

3 Communities!

- Official recognition
- Improved processes
- Communication

YAML Serialization

YAML

- Simplified human-readable format
- Same syntax for data and tests
- More flexible than XML serialization
- Can use OpenERP API, for Python tests

YAML

YAML Example

```
- Scenario: In order to check the survey module
-
- I Create 1 survey and define 1 survey page
-
!record {model: 'survey', id: survey_0}:
    title: 'Partner Feedback'
    max_response_limit: 20
-
!record {model: 'survey.page', id: survey_pg_0}:
    title: 'Who are you?'
    survey_id: survey_0
```

New module recorder: test scenarios, data

OpenERP

Continuous Integration: automated test suite

- Communication

Framework changes

- improved security (injection vectors, private methods)
- import openerp
- openerp client lib
- ~~import wizard~~
- simplified links, act_window
- default_focus on fields, buttons
- decimal_precision for all floats

Open ERP

Massive cleanup

- `--terp--` → `--openerp--`
(backwards comp.)
- cleanup of data load
(`convert.py`)
- server startup `-i -u -t`,
rollback
- ORM API documentation
online

OpenERP

Generic tools

- mail history per object
- base.action.rule
- resource object for planning, used by mrp, project_long_term
- CalDAV calendar sync (Desktop or Web sync)
